This Bio-Digester Tank is
available in different sizes as
per the customers' requirement

Unbreakable Non-Corrosive Bio-Digester Tanks

As per the *Clean India Journal*
dated 11th September :-

The bio-tanks, made of non-corrosive stainless steel, are fitted with bio-filters and uses bio-enzymes to treat human waste. It operates in three stages - In the first stage, the human waste collected in the tank is treated with bio-enzymes which eat up all the solid waste. In the second stage, the bio-filters fitted in the tank further purify the wastewater. In the third stage, the treated water is released through an outlet into the backwaters.

"The treated water has been tested and certified by the Allapuzha Pollution Control Board, Thiruvananthapuram Government Laboratory, Chennai Government Laboratory and the Ministry of Environment and Forest, New Delhi," says M D Vijayakumar, Managing Director of Vijay Group of Companies. "We also have the Non-Toxic Certificate issued by SGS India Ltd, an international certifying company," he adds.

* The above technology is widely used in the European countries

Our technology is approved by Ministry of Environment Forest, Paryavaran Bhavan, New Delhi.
Non - Toxic Tests Conducted and Approved by SGS India Ltd.
